

# ENERFLOW INDUSTRIES INC.

## Custom Built Drilling Solutions

**Mud Systems** Whatever your preference is for, Shakers, Vacuum Degassers, Mud Gas Separators, Poor Boy Degassers, Centrifuges, or Mud Cleaners. Enerflow will design your system to operate efficiently in removing your suspended solids from the different drilling muds. With an efficient operating Solids Control System you are removing more solids and lose less fluid, thus allowing you to increase your ROP, and reduce your mud costs. Each system is custom designed to be trouble free, safe to operate, easy to maintain and guaranteed to integrate smoothly with your rig setup.

**Service Rigs** With its smaller size and shorter wheelbase, the ESR-550 has been expertly engineered to navigate tight European road systems, and with full CE certification and ATEX compliance can be easily put into service anywhere in the world. Once deployed, you will be impressed by the ESR-550's remarkable capabilities. The Enerflow ESR-550, impresses with a small footprint - big power - better performance!
